Subject: PAS upgrade (SPs)

This notice is being sent to inform PAS users of the upcoming build scheduled for the evening of 4/25/08 to add some enhancements to PAS. Listed are the major enhancements being added:

- Dedicated Customer Part 4 Reminders – PAS will now only send one Part 4 Reminder for Dedicated Customer requests (vs 10).
- NPAC Validations –
 - NPAC Enhancement - SPID Alpha-Numeric Validation - the SPID value entered must be a four character alpha-numeric value and if alpha characters are being used they must be uppercase. If a SPID value is entered that does not meet these parameters an error message will occur until valid values are entered.
 - NPAC Enhancement SPID NPAC Validation - the service provider must have a valid SPID created in the NPAC region where the block is to be entered. If a SPID value is entered that does not meet these parameters an error message will occur until valid values are entered. The User will have the option to override and submit the request.
 - NPAC Enhancement - LRN Validation - the service provider must have a valid LRN created in the NPAC region where the block is to be entered and the LRN must be associated with the SPID listed on the pool block application. If a LRN value is entered that does not meet these parameters an error message will occur until valid values are entered. The User will have the option to override and submit the request.
 - NPAC Enhancement - LATA ID Validation to LRN - When a pool block request application is being completed, there will be a validation that the NPA-NXX of the pool block and LRN are in the same LATA. If the LATA ID and LRN are not in the same LATA an error message will occur until the correct values have been entered. The User will have the option to override and submit the request.
